

### **Large Bakery DIY Upgrade, John Emes Bakery, South Yorkshire**

Expansion of this family business involved the purchase of an adjoining building. John contacted us knowing our pedigree in the food industry. The installation was carried out personally with help from skilled builders within his family. Full on site support by Peter our Chief Engineer followed when required.

Over 100 x 4 metre high pvc thermopanel and in excess 800 square metres of galvanised suspension system for a new ceiling was installed. Up to 1000 of our strip clad tongue and groove flush pvc planks were fixed to the suspension to form a fully sealed washable ceiling. His clients more than approve.
