

Top Marks from Queen Ethelburga's

When Hygenic went back to school to fit kitchens at Queen Ethelburga's College, the job just grew and grew.

The prestigious private school for boys and girls was so delighted with the installation work that it asked Hygenic to stay on and do a little more...

By the time the team had finished, it had fitted more than 600 square metres of PVC food safe thermopanel to walls, ceilings, stairways, storerooms, kitchen offices and other preparations areas.

"We were extremely impressed by Hygenic," said Andrew Webster of Queen Ethelburga's. "The company's pedigree and impressive client list gave us total confidence – and we were not disappointed."

Hygenic were called at the last minute to the school at Thorpe Underwood near York, after kitchen contractors Scobie McIntosh realised the large basement kitchens they had been fitting needed a wall finish with more long-term durability than paint.

MD Geoff Ryan met the client and contractor on site and was given just two weeks to finish the job. Extruded PVC 2.5mm thick was recommended and specified. The fitting teams sprung into action and, when the project was completed on time and to the highest specifications, the college asked Hygenic to fit its food safe system to other kitchen-related areas. Ceilings were installed in Hygenic's own 'Sturdy clad' t+g PVC for a more durable and cleanable surface.

Queen Ethelburga's is but one of dozens of schools to benefit from Hygenic's expertise. Other schools visited by the team include: Southmoor School, Sunderland; St Malachy's, Halifax; Sheffield University; Cullingworth Primary, Keighley; Faversham College, London; Ossett High School, Wakefield; Woodlands Primary, , North & Central Regions....the list goes on and on across the UK.
