Introduction

to Hygenic Installations Ltd.

Established in 1988, Hygenic Installations is acknowledged as one of the U.K's foremost authorities in the supply and installation of hygienic walls and ceilings.

Dependent upon prevailing conditions and requirements, we can offer a wide range of systems, both functional and decorative, tailored precisely to fit your specification.

All systems are designed to accommodate:-

- Access hatches
- Sprinkler systems
- Specialist lighting

THERMOPANEL

The introduction of our Thermopanel grid system has enabled us to move into many previously untapped markets. The exposed grids range from 600 x 600 to 1200 x 600, dependent upon the thickness of the Thermopanel tile itself (between 3mm and 10mm).

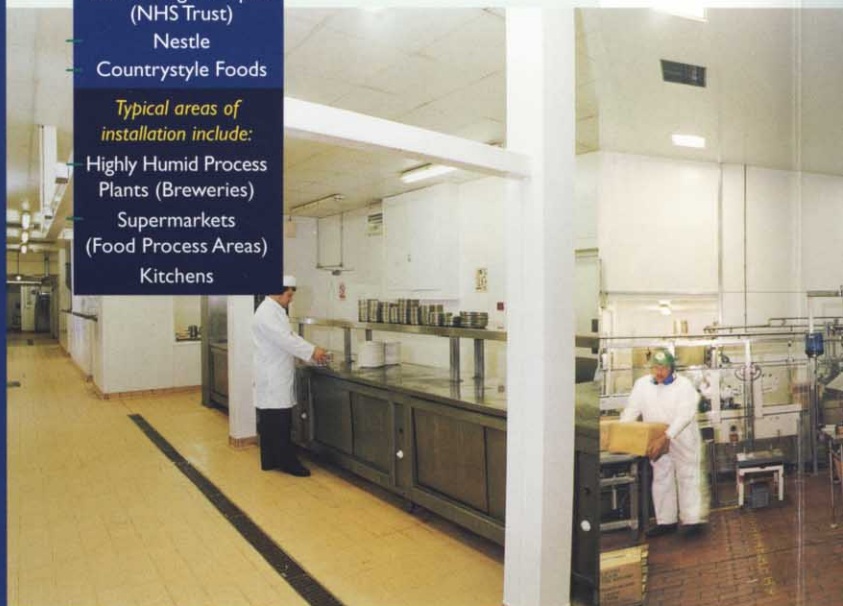

Alternatively full 600mm wide panels of up to 3m long, can be fixed directly to the ceiling. Thermopanel is foodsafe and Class '0' fire rated and is available in a range of colours in addition to white.

Clients Include:

- Scarborough Hospital (NHS Trust)
- Nestle
- Countrystyle Foods

Typical areas of installation include:

- Highly Humid Process Plants (Breweries)
- Supermarkets (Food Process Areas)
- Kitchens

STRIPCLAD / STURDYCLAD

A system which incorporates interlocking hollow p.v.c. 'planks' to give a pleasing white boarded appearance with Class 1. fire rating. The two systems are basically similar with Sturdyclad having a thicker wall to the underside for extra impact resistance. Both systems are wipeclean but can withstand pressure cleaning should the situation demand it.

Foodsafe
MF System

WALK-ON

Our walk-on ceiling system features a 100/150mm metal faced polystyrene sandwich suspended in a galvanised channel 'carrier' with clip on cover. As well as offering a high degree of insulation, walk-on ceilings give access and subsequent maintenance to all services routed above without the need to interrupt important production processes below. The face surfaces are foodsafe and wipeclean or steam cleaned as deemed preferable.

 Rank Organisation,
 Swallow Hotels

Clients Include:
 W.M. Morrisons Supermarkets
 High Street Shops (various)

Typical areas of installation include:
 Shop Fronts
 Canteens
 Offices
 Forecourts

DECORATIVE PLANK

Generally suspended to allow for lights and other services, decorative planks consist of preformed metal strips clipped onto suspended metal carriers. The gaps between the strips can be infilled or left open as desired.

There is a choice of white, coloured or woodgrain finishes and the system is particularly suitable for outdoor applications and other decorative situations.
